

CSC3100 Assignment 1 Grading Rubric

Score Composition

Component	Marks	Method
Code	50	20 cases x 2.5 marks
Report	50	Evidence-based rubric review

Code Assessment

The grader executes 3 public and 17 hidden cases covering numRows from 1 to 20. Each exact expected output earns 2.5 marks. Execution failures and malformed output earn zero for the affected case.

Report Assessment

Criterion	Marks	Evidence expected
Algorithm clarity	15	Accurate, understandable step-by-step explanation
Correctness reasoning	10	Explains why row construction is correct
Complexity analysis	10	Correct time and space complexity
Implementation and examples	10	Connects code decisions to a worked example
Presentation and originality	5	Clear structure, attribution, and authentic reflection

Report Scoring Bands

For each criterion: full credit requires complete, accurate, evidence-supported work; substantial credit indicates minor omissions; partial credit indicates incomplete or weakly supported work; minimal credit indicates major problems; zero indicates absent, irrelevant, or unverifiable work.

AI-Writing Risk Policy

The simulated AI-writing indicator is a review signal, not proof of misconduct. Medium-risk reports should show supporting evidence to the teacher. High-risk reports require teacher review. No marks are automatically deducted solely from the indicator.

Submission Handling

Malformed archives are quarantined until the teacher accepts or rejects them. Late submissions are graded without an automatic penalty in this MVP and are clearly flagged for teacher decision.
